

Face Mask Detection

Project Description :

Our project will find out the persons who wear any face mask in their face. It is necessary for our country. There are many thefts in the shopping malls of our country. Thieves often cover their faces with their mask or something else. If we set the mask detection system in the main gate of shopping malls and fix that the person with face mask and covering face with something cannot get inside the mall. I think it is possible to reduce theft and robbery in this way. Many Bank will also face this problem so it will help them to protect their Bank.

I will collect information for implement our project. I will reprocessing the dataset for our project. I will help my partners in writing the report. This project will took around 30 days for complete I think.
